

Applications

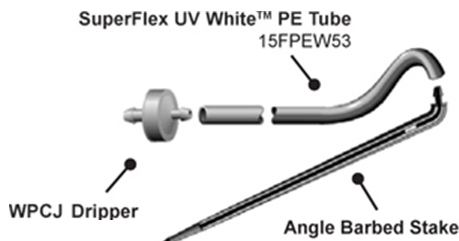

Greenhouse, Nursery, and Orchards

Features and Benefits

- Pressure Compensating-uniform emission throughout the system and longer lines.
- Automatic shut-off-lines will not drain, allowing for a very short drip cycle.
- Insensitive to clogging, therefore low maintenance requirements.
- Can be cleaned with acid, peroxide or chlorine.

Applications

Greenhouse Baskets

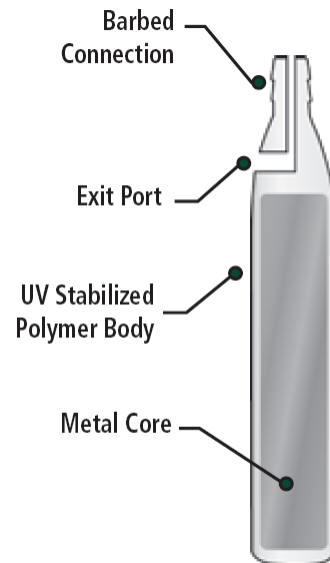

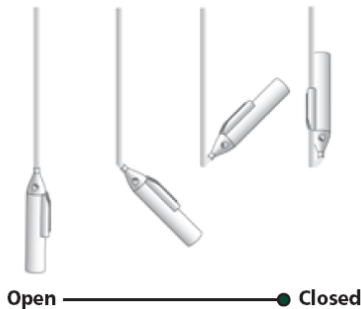

Features and Benefits

- Netafim has developed the SlimLine EZ Close as a solution for basket irrigation.
- The SlimLine EZ Close has a UV Stabilized polymer body that is an easily visible white colour.
- No metal is in contact with water or fertilizers so the system is compatible with acid for flushing and all other traditional maintenance practices.
- The SlimLine EZ Close new shape makes it easy to withdraw from all types of plants, without causing damage.

One Handed, Quick Close-Off

We kept the popular quick close-off feature of our red plastic weight. At a glance, it's easy to see if the dripper is open or closed. Closing off drippers when not in use prevents algae mess, insect issues, annoyance to workers and customers and is a Best Management Practice (BMP) for conserving water and fertilizer.
